

Test Plan VS Test Strategy

The "What" vs. The "How"

🏷️ Tags: QA, Testing, Documentation

🕒 Reading Time: 3 min

🚀 TL;DR

Test Strategy is the high-level approach (Generic, rarely changes).

Test Plan is the specific plan for a project (Specific, changes often).

🤖 The Core Difference

Think of the Strategy as the "Rulebook" and the Plan as the "Schedule."

🌍 Test Strategy (The Approach)

The High-Level Vision.

- Defines **HOW** we test generally across the company.

- Decided by Managers or QA Leads.
- Rarely changes (static).
- Includes: Tools to use, standards, automation goals.

Test Plan (The Project)

The Specific Tactics.

- Defines **WHAT, WHEN, and WHO** for a specific release.
 - Decided by QA Leads or Senior Testers.
 - Changes with every project (dynamic).
 - Includes: Deadlines, features to test, team members assigned.
-

The Military Analogy

The Strategy:

"We will win the war by using air superiority and stealth technology."

(This is the general philosophy for the whole war).

The Plan:

"On Tuesday at 08:00, Pilot John will fly Jet X to Target Y."

(This is the specific instruction for this week's mission).

The Comparison Matrix

Component: Scope

- Strategy: Organization-wide (All projects follow this).
- Plan: Project-specific (Only for this sprint or release).

Component: Who writes it?

- Strategy: Product Manager / Test Manager.
- Plan: Test Lead / Senior Tester.

Component: Contents

- Strategy: Tools, bug reporting standards, environment setup.
- Plan: Schedule, resource allocation, features in/out of scope.

Component: Number of Documents

- Strategy: One (usually).
 - Plan: Many (one for every new release/feature).
-

Real World Example

The Strategy Document says:

"We use Jira for bugs, Selenium for automation, and we must support Chrome and Firefox."

The Test Plan (for the Christmas Update) says:

"We will test the new Gift Card feature. Testing starts on Dec 1st. Georgia will test the frontend, Mark will test the API. We must finish by Dec 15th."
