

The Perfect Bug Report

Writing So Developers Love You

🏷️ Tags: QA, Bug Life Cycle, Best Practices

🕒 Reading Time: 4 min

🚀 TL;DR

A generic report says "It's broken."

A perfect report says "Here is exactly how to break it, step-by-step."

Goal: Eliminate the need for the developer to ask you, "How did you do that?"

🧐 The Anatomy of a Perfect Bug

Your bug report is not just a complaint; it is an instruction manual. It needs to include these 3 critical sections:

1. The Summary (The Headline)

It must be specific.

-  Bad: "Login doesn't work."
-  Good: "Login returns 500 Error when Password contains special characters."

2. The Steps to Reproduce (The Recipe)

Assume the developer knows nothing. Write it like a robot script.

1. Open the Homepage.
2. Click "Login".
3. Enter Username: "TestUser".
4. Enter Password: "Password1!".
5. Click "Submit".

3. Actual vs. Expected Result (The Evidence)

This is the most crucial part.

- **Actual Result:** "A red 'Internal Server Error' banner appears."
 - **Expected Result:** "The user should be redirected to the Dashboard."
-

The "Evidence" Rule

"If there is no screenshot, it didn't happen."

Always attach a screenshot or a screen recording.

- For UI issues: Screenshot.
 - For Workflow/Crash issues: Video.
 - For Logic/Data issues: Attach the Server Logs.
-

The "Works on My Machine" Prevention

To stop developers from saying "I can't reproduce it," add the **Environment Details**:

- **OS:** Windows 10 / macOS Sonoma
 - **Browser:** Chrome Version 120
 - **Device:** iPhone 14 Pro
 - **Network:** WiFi / 4G
-

💡 Real World Example

Bad Bug Report: 😡

Title: App crashes.

Description: I tried to open the settings and it closed. Please fix.

Perfect Bug Report: 🏆

Title: **[Crash] App closes immediately when toggling "Dark Mode" on iOS**

Severity: High

Environment: iOS 17.2, iPhone 13

Steps to Reproduce:

1. Launch the App.
2. Navigate to Profile > Settings.
3. Scroll down to "Appearance".
4. Tap the "Dark Mode" toggle switch.

Actual Result: The app freezes for 1 second and then crashes to the phone home screen.

Expected Result: The app theme should switch to dark colors without crashing.
