

Test plan

1. Test Plan Overview

- **Project:** Georgia E Antoniou – Software Tester Portfolio
 - **Type:** Static Blazor WebAssembly site hosted on GitHub Pages
 - **Purpose:** Prove that key pages (Home, Portfolio, About, Blog, Contact) load correctly, links work, and core content is accurate and accessible across devices.
 - **Goals:**
 - No broken links or navigation issues.
 - All main content (role, tagline, certifications, social links) visible and correct.
 - Basic automated tests in place for Blazor components (navigation and main sections).
-

2. Scope

In Scope

- **Pages and navigation**
 - Home: title, tagline, "View My Projects" CTA, footer copyright.
 - Portfolio: project list and links (once populated).
 - About: your profile text and skills.
 - Blog: list of posts (or "coming soon" message).
 - Contact: contact options (form or links).
- **Global navigation bar**
 - Icons + text for: Home, Portfolio, About, Blog, Contact.
- **External links**

- LinkedIn and GitHub icons in the hero section.
- **Visual checks**
 - Layout and readability on desktop and mobile.
- **Automated tests**
 - Blazor component tests (e.g., Nav menu, Home page sections).

Out of Scope (v1)

- Performance/load testing.
 - Security/penetration testing.
 - Full end-to-end browser automation.
-

3. Test Strategy

3.1 Manual Testing

1. Functional tests

- Open each page via top navigation and verify correct URL and content.
- Click "View My Projects" on Home → ensure it opens the Portfolio page.
- Click LinkedIn icon → LinkedIn profile opens in new tab.
- Click GitHub icon → GitHub profile opens in new tab.

2. UI/UX tests

- Check that the header (your name + "Quality Focused Software Tester") is clearly visible on Home.
- Verify the main tagline and subtext render properly:
 - "Certified Software Quality Specialist"
 - "From Deep Exploratory Testing to Foundations in C# Automation..."
- Confirm the footer text and year: "© 2025 Georgia E Antoniou. All Rights Reserved."

3. Cross-browser / device

- Test on:
 - Chrome (desktop).
 - Edge or Firefox (desktop).
 - Mobile view (using DevTools responsive mode).
- Check that navigation menu and hero text are readable and not overlapping.

3.2 Automated Testing

- **Tools:** xUnit
 - **Components to test (examples):**
 - **NavMenu** :
 - Renders all 5 links: Home, Portfolio, About, Blog, Contact.
 - Each link points to the correct route.
 - **Home** component:
 - Contains your name.
 - Contains "Quality Focused Software Tester".
 - Contains the "View My Projects" button and its link.
 - **Footer** component:
 - Contains year 2025 and your full name.
-

5. Entry / Exit Criteria

- **Entry Criteria**
 - Portfolio builds successfully.
 - GitHub Pages deployment is live at <https://georgia-antoniou.github.io/>.
- **Exit Criteria**

- All planned manual tests executed; no high-severity issues open.
